

For Immediate Release

IQALUIT, Nunavut (March 14, 2017) – Qulliq Energy Corporation (QEC) has completed the construction and testing of the new Qikiqtarjuaq power plant. The new power plant is the second major project recently completed by QEC. In November 2016, QEC announced the operation of a new power plant for the community of Taloyoak.

The new power plant is equipped with four new fuel efficient generator sets capable of supplying up to 1.8 megawatts of power. Designed to provide reliable power for 40 plus years, the new plant also features a hospital-grade silencer to minimize sound pollution, and will accommodate renewable energy systems.

QEC plans to mark the official opening of the new power plant with a ribbon cutting ceremony and community feast at the Qikiqtarjuaq community hall.
